

SUPPLEMENTARY FIGURE 2. SARS-CoV-2 infection attack rates* using a modified case definition among household contacts (N = 431) with known case status by household contact characteristics,^{†,§} index patient characteristics and practices,^{†,§,¶} and combined vaccination status — four U.S. Jurisdictions, November 2021–February 2022.**

Abbreviations: Full = fully vaccinated; HC = household contact; IP = index patient; Partial = partially vaccinated; Unvacc = unvaccinated.

* Analysis of attack rates among HCs excluded persons with unknown case status or “unknown” categorization within a given stratum. 95% CIs for attack rates are represented by error bars.

[†] The modified case definition among household contacts was restricted to cases identified ≤7 days after the index date (i.e., the date of the index patient’s symptom onset or positive SARS-CoV-2 test).

[§] Age at index date was determined from date of birth or self-reported age.

[¶] Received a booster was defined as having received an additional dose after completion of the primary COVID-19 vaccination series before the index date. Fully vaccinated was defined as completion of the primary vaccination series ≥2 weeks before the index date and stratified into completion <5 months or ≥5 months before the index date. Some persons who were fully vaccinated had unknown dates for completion of their primary vaccination series. Partially vaccinated was defined as having only 1 dose of 2-dose series or completing the primary vaccination series <2 weeks before the index date.

** Persons reported their race (White, Black, Asian, American Indian or Alaska Native, Native Hawaiian or other Pacific Islander) and ethnicity (Hispanic/Latino, non-Hispanic/Latino) from lists of options and had the opportunity to state another option if their race or ethnicity was not listed. The “other/multiple” race category included American Indian or Alaskan Native, Native Hawaiian or other Pacific Islander, another race specified by the person not in the provided list, or multiple races.

^{††} Analysis for attack rates by combined vaccination status combined persons who were fully vaccinated or had received a booster into one category and persons who were partially vaccinated or unvaccinated into another category.
